

CL Pharmasuite™ – software for effective pharma and medical device production

“ CL Pharmasuite enables multiple product types and flexible batch sizes down to batch size one, yet increase the quality level. The result will be time - and cost savings which reduces your time to market.

CL Pharmasuite™ is a suite of extensive software solutions that meets your logistic and manufacturing software needs and is fully adapted to the specific demands of the pharmaceutical and medical device industry.

It controls and manages the production flow and provides traceability for all actions that occurs on the line. The software manages complete production lines and its processes such as preparation, assembly, inspection, testing, repairing and packaging.

What we can do for you

CL Pharmasuite™ works in real-time, on the factory floor. This closeness to production and its real-time ability gives you effective production control and secures safe implementation with a minimum of validation effort. The ease of validation is further strengthened by the ability to securely link to ERP and other systems. As an option in CL Pharmasuite, CL EBR (Electronic Batch Records) creates a paperless production system which significantly increases the effectiveness provided by the suite.

Compliant Logistics' software supports automatic as well as manual operations on the production line and includes support for work instructions (SOPs).

CL Pharmasuite will allow multiple product types and flexible batch sizes down to batch size one, yet increase the quality level. All of this will result in time and cost savings.

CL Pharmasuite™ – software for effective pharma and medical device production

The main functions

Our software enables lean production and offers support to the following functions:

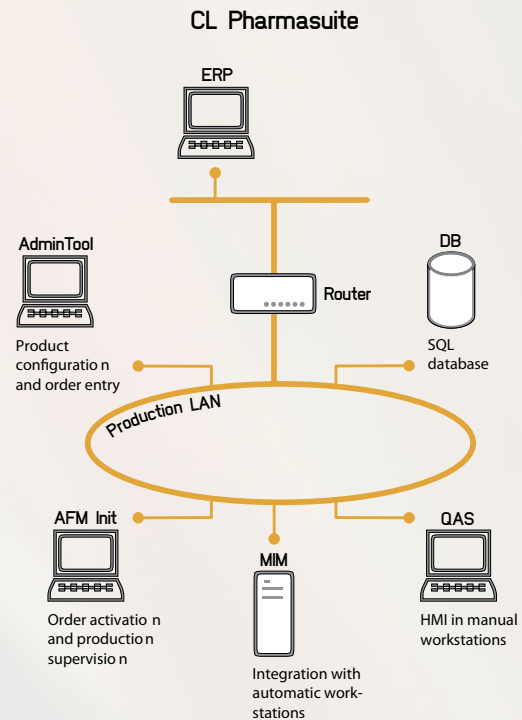

- Product configuration
- Production order management
- Production management – routing, variants, SOP's etc.
- Traceability
- KPI's, Key Performance Indicators in real time.
- ERP integration
- EBR, Electronic Batch Records, (optional)
- Radio Frequency Identification (RFID) used as an underlying technology which manages and controls the flow.
- Physical and logical control of production line(s) and product carriers.
- Interface communication with all users, both operators and automated operations allowing the exchange of information.
- Database storage set-ups, operator and product configuration and production data.
- Controlled handling of irregular events such as power failure, rework, stop, hold and resume.
- Enhanced functions to balance and optimize the flow.

The benefits to you are:

- Increased yield, capacity and production efficiency.
- Higher utilization of operators as well as automated operations.
- Increased quality in operation.
- Decreased time to market.

The differences that make the difference

Compliant Logistics has designed this software based on long-term experience from leading industries such as automotive and electronics and combined it with our solid expertise within the medical area. We provide specifically designed solutions to meet the industry's high demands on, for example, line clearance, authorisation, quality control, electronic batch records and signatures.

The results

You run your production lines on your terms, in real time. The cost savings as a result of increased efficiency and flexible batch sizes are significant and you can easily steer your production and balance for maximum throughput, with both parallel and sequential production. The features support and simplify your process validation of new or modified products. We ensure that you remain in compliance, meeting all your quality and regulation issues.

Our experience

Compliant Logistics specialises in Medical and Pharma production efficiency – in compliance with GMP regulations. We know and understand the medical device and pharmaceutical industry requirements. By providing integrated products, solutions and services, we enable our customers to achieve lean manufacturing while remaining In Compliance at cost-effective levels.
